

Bringing *Logix* to Data and Technology

Software Architecture

Business Intelligence

IT Training

Database Management

intraLogix was founded in 2002 with a passion to walk side by side with customers to help them make sound decisions - and then implement those decisions - applying technology to their business. We are a small IT company focused on providing well rounded solutions to bring logic and understanding to your data and technology.

With over 40 customers in Montana, the United States, and Africa, we pride ourselves on quickly adapting to your needs. Nestled South of the Clark Fork River near downtown Missoula, we welcome you to come visit with us and brainstorm on possibilities to increase not only customer service, but ultimately productivity and profitability. We are your *partner* in business!

### Process Refinement and Design

Our team of architects will meet with your employees, customers, and decision-makers to deliver recommendations and solutions tailored for your needs. Spending the time to create a structurally sound foundation will save you time and money in the long run. In the end, you will have an extensible solution which can be built upon for future development.

### Software Architecture and Development

Our software engineers utilize cutting edge tools to bring a simple, intuitive solution to your team. Using a rapid prototype model, we prove concept and assure the elements before a solution is completely developed. Throughout development, we work with you to assure the solution exceeds your expectations.

### Data and Application Management

Businesses wrestle with the concept of managing their own data and applications. We work with customers who require entire outsourcing of their data to others who simply need additional help on special projects. From remote SQL Server management to complete hosting of solutions, intraLogix can assist in completing your IT puzzle.

### Data Interfaces and Sharing

Behind the scenes of so many applications, there is a link from one data source to another. We employ the NED2 principle ("Never Enter Data Twice"). The advent of Web Services means that virtually any data source can be interfaced from point A to point B. intraLogix has created interfaces with many applications including QuickBooks, Siebel CRM OnDemand, SalesForce, and even geospatial systems such as ESRI ArcServer.

### Training

We welcome the opportunity to immerse you in a class or consulting session on the IT technology which you will be utilizing. The intraLogix staff includes Microsoft Certified Trainers who combine best practices with real-life knowledge and experience brought directly to you. Courses and consulting sessions in Crystal Reports, SQL Server Administration and Programming, XML and the host of Visual Studio products (ASP.NET, Visual Basic.NET and C#) are available.
